CA4101 Enterprise Architecture

In-Class Exercise 2a

UML Use Case Modelling

Draw a UML Use Case Diagram for a library system, a customer has the following functionality at their disposal: Searching the library catalogue; Returning a book; Reserving a book; Borrowing a book (with the option of Paying a fine). A librarian has similar functionality with the exception of Paying a fine and the additional functionality of Checking customer status. Some of these actions require that the user verify their account and you should include that in your diagram.
